

Exhibition graphics:  
**Atmosphere: exploring  
climate science**  
for the Science Museum,  
London, 2010

## Project summary

The design (with Casson Mann) of the **Atmosphere** gallery, 'exploring climate science', for the Science Museum, 2010. Through rigorous scientific evidence, Atmosphere brings much needed clarity to the controversial subject of climate change. Our colourful, animated graphic projections (with AllofUs), covering floor and ceiling, dynamically register the greenhouse gas emitting game-play of visitors. With the effect on the climate of everyday human activity rendered so engagingly clear, people can make up their own minds on what mitigating action they can take for real. A better understanding of the facts guarantees more effective mitigation.
